## Fuel Magic's Unique Polar Technology

The Fuel Magic technology has a unique penetrating action that attracts to the metallic surfaces of the engine and fuel system. This polar compound, when combined with a combustion modifier that burns fuel more completely, produces multiple benefits that were never before possible with conventional fuel additives. This highly concentrated formula is so effective that it consistently performs at a profit of at least 5 to 1 over its cost in fuel savings alone. Fuel Magic can be used profitably in daily use in all vehicles and is equally effective with both petrol and diesel fuels.

The formula, created with compounds containing only carbon, hydrogen and oxygen, works from the fuel tank through all of the engine systems to the exhaust system and improves the efficiency in every area.

### Multiple Benefits:

**IN THE FUEL TANK:** The molecular attraction causes the additive to disperse and blend with fuel quickly. It can be introduced either before or after fueling and no stirring is needed. Fuel Magic is attracted to the tank walls and forms a thin film which displaces corrosion and allows it to fall away where it can be removed through the filtration system. This thin film provides a protective coating that prevents new corrosion from forming.

**Fuel Magic stabilizes stored fuels**, prevents loss of combustibility, fuel separation, formation of water and algae growth.

**IN THE FUEL INJECTION SYSTEM:** The attraction of Fuel Magic to metal creates a thin protective film on the mechanical parts of the fuel pump and injectors which adds lubricity, reduces wear and keeps injectors clean. It reduces coking on diesel injectors.

**IN THE COMBUSTION CHAMBER:** The Fuel Magic polar compound attracts to the cylinder walls, pistons and cylinder head creating a thin film that reduces engine wear and piston scuffing. It also penetrates combustion deposits, even hardened ones, and removes them with each firing of the engine, increasing the overall fuel efficiency. Older engines begin to run like new again. Newer engines retain their cleanliness and have reduced wear, less overhauls.

The combustion modifier creates a more complete fuel burn which adds power and reduces exhaust emissions. Fuel economy is increased and hydrocarbon emissions are decreased.

**IN DIESEL ENGINES** the combustion modifier increases cetane by about 2 numbers.

**IN PETROL ENGINES** combustion deposit removal reduces the octane requirement of the engine by 5 to 7 numbers.

**IN THE EXHAUST SYSTEM:** The combination of a more complete fuel burn along with increased combustion chamber cleanliness reduces exhaust emissions by about 20%. A greater decrease of emissions is seen in older engines with combustion deposit buildup. Fuel Magic is burned completely before exiting into the exhaust system. The cleaner emissions will reduce the load on aftermarket diesel particulate traps and catalytic converters.

**Fuel Magic conforms to the standards set by the World Wide Fuel Charter**, a consortium of automotive manufacturers worldwide including Ford Motor Company, General Motors Corporation, Caterpillar Inc., Detroit Diesel Corporation, Mitsubishi Fuso Truck of America Inc., Volvo Powertrain Corporation and 70 associate members. Fuel Magic will not void engine warranties.

The Fuel Magic formula is classified by the EPA as "substantially similar" to fuel and can be safely used to bulk treat all fuels including leaded and unleaded petrol, ethanol, biodiesel, high and low sulfur diesel fuels. **EPA Registry #207120001**
